* Claude How can I upgrade to this version from my previous version? Do I need to uninstall my previous version first, do the installation and then install the previous version? Or I will just directly upgrade to this version, without uninstall my old version? Thank you. I have a few questions:1- My first question is, is there a way to increase the size of the bootable ISO on my USB drive? I'm using Rufus and I tried my best and it's still not big enough.2- I'll have two different versions of Ubuntu running on my computer. One on my Win 10 computer and the other on my Ubuntu computer. I want to keep them both, so I want to partition my hard drive to have Win 10 on one side and Ubuntu on the other. So when I turn on my computer, I just want it to go straight to Ubuntu. How can I do this without having to partition my hard drive? 3- When I go to install Ubuntu, I have the option to add a "Ubuntu Studio" which I think is Studio 17.0. But when I check out this version, I see that there is no Studio 17.0. So is the version of Ubuntu that I have on my computer only Studio 16.04? Thank you so much for your help. I've been searching for the answers for the past couple of days but with no luck. If you can help me with any of these questions, that would be great. 3- When I go to install Ubuntu, I have the option to add a "Ubuntu Studio" which I think is Studio 17.0.
